

BABY CALCULATOR

Objective:

A simple calculator with most basic mathematical options only take 2 values and giving their output result.

Team:

1. Mohammad Bilal (CT- 275)
2. Muhammad Umer Pervez (CT-256)

Role of team members:

- Partial coding was done by Bilal
- Completion was done by Umer
- Debugging and correction was done by Bilal
- Umer made the Repository on Git hub
- Umer Pushed the code
- Commenting was done by Bilal

Steps taken to make the project:

- First initializing of variables was done
- Some functions were made to take input from the user
- Another function was made to take the input of the operation
- Switch case was mainly used to control the flow of the program

- Some conditions were made in the program as well like; if anything divides with 0 then exit the program

Step for uploading the code on git hub:

- First linked his VS code with the git
- Then he created a repository on git hub
- Then he commented the code
- Next, he pushed the code to the git hub.
- And saved the code there.
